## CLAIMS

Therefore, having thus described the invention, at least the following is claimed:

10

1. An electrical device comprising a mounting yoke for mounting said electrical device into an outlet box.
- 15 2. The electrical device of claim 1 wherein said yoke comprises: a slotted mounting hole for receiving a mounting screw, and a channel leading into said slotted mounting hole.
- 20 3. The electrical device of claim 2 wherein said mounting screw comprises an elongated post, a head positioned at one end of the elongated post and support rim positioned along the elongated post at a predetermined distance from said head and in a plane that is substantially parallel to the plane in which said head lies.
- 25 4. The electrical device of claim 3 wherein said channel extends from an outer edge of said yoke into said slotted mounting hole.
5. The electrical device of claim 2 wherein said channel is positioned so as to open into said slotted mounting hole.
6. The electrical device of claim 2 wherein said channel comprises a substantially enclosed opening.
- 30 7. The electrical device of claim 4 wherein said channel comprises two walls that are substantially parallel to each other.

- 5        8. The electrical device of claim 4 wherein said channel comprises two walls  
            that converge inward from an outer edge of said mounting yoke into said  
            slotted mounting hole.
- 10      9. The electrical device of claim 6 wherein said channel is generally circular  
            in shape.
- 15      10. The electrical device of claim 9 wherein said channel is configured so as  
            to be large enough to accommodate the head of said mounting screw.
- 20      11. The electrical device of claim 2 wherein said electrical device comprises a  
            receptacle.
- 25      12. The electrical device of claim 2 wherein said electrical device comprises a  
            switch.
- 30      13. The electrical device of claim 2 wherein said electrical device comprises,  
            an audio control device.
14. The electrical device of claim 2 wherein said electrical device comprises a  
            video control device.
15. An electrical device comprising:  
            a mounting yoke for mounting said electrical device into an outlet box;  
            said mounting yoke comprises:  
                slotted mounting hole for receiving a mounting screw; and  
                channel configured to open into said slotted mounting hole.

- 5        16. The electrical device of claim 15 further comprising an electrical receptacle.
- 10      17. An electrical device comprising:  
                mounting yoke for mounting said electrical device into an outlet box;  
                said mounting yoke comprises:  
                        slotted mounting hole for receiving a mounting screw; and  
                        score line delineating a portion of the yoke that can be removed to  
                        form a channel that opens into said slotted mounting hole.
- 15      18. The electrical device of claim 17 further comprising an electrical switch.
- 20      19. An electrical device comprising:  
                mounting yoke for mounting said electrical device into an outlet box;  
                mounting screw for mounting said device into an outlet box;  
                said mounting screw comprises:  
                        elongated post connected at one end to a head;  
                        support rim positioned at a predetermined point along said  
                        elongated post and in a plane substantially parallel to the plane in  
                        which said head lies;  
                said mounting yoke comprises:  
                        slotted mounting hole for receiving said mounting screw; and  
                        channel configured to open into said slotted mounting hole.
- 25      20. The electrical device of claim 19 further comprising an electrical switch.
